

Special Session

Research and experience on RFID projects

SESSION ORGANIZERS

Prof. Luca Catarinucci (luca.catarinucci@unisalento.it), University of Salento, Lecce, Italy

Prof. Arnaud Vena (arnaud.vena@ies.univ-montp2.fr), University of Montpellier, Montpellier, France

ABSTRACT

RFID is an enabling technology for many research/industrial projects. The RFID-TA Special Session “Research and experience on RFID projects” is intended to collect the multidisciplinary contribution of research groups and companies involved in RFID projects.

The session will represent a practical way

- to give visibility to positive ideas and real projects
- to satisfy the requirements concerning the dissemination of projects results.

The interaction among colleagues, involved in similar activities, will be promoted as well as the matchmaking with potential new partners for the upcoming calls for projects. Feel free to present to your colleagues the idea behind your RFID project, the issues you are experiencing, and the solutions you are adopting. A perfect special session for effective networking.
